

## Section 5.7: Integrals Resulting in Inverse Trigonometric Functions

In this section we focus on integrals that result in inverse trigonometric functions. Recall that trigonometric functions are not one-to-one unless the domains are restricted.

The following integration formulas yield inverse trigonometric functions:

$$1) \int \frac{du}{\sqrt{a^2 - u^2}} = \sin^{-1} \frac{u}{|a|} + C$$

$$2) \int \frac{du}{a^2 + u^2} = \frac{1}{a} \tan^{-1} \frac{u}{a} + C$$

$$3) \int \frac{du}{u\sqrt{u^2 - a^2}} = \frac{1}{|a|} \sec^{-1} \frac{u}{|a|} + C$$

**Media:** Watch these [video1](#), [video 2](#), and [video3](#) examples on integrals involving inverse trig functions.

### Examples

- 1) Evaluate the definite integral  $\int_0^{\frac{1}{2}} \frac{dx}{\sqrt{1-x^2}}$ .

$$\begin{aligned} \int_0^{\frac{1}{2}} \frac{dx}{\sqrt{1-x^2}} &= \sin^{-1} x \Big|_0^{\frac{1}{2}} = \sin^{-1} \frac{1}{2} - \sin^{-1} 0 \\ &= \frac{\pi}{6} - 0 = \boxed{\frac{\pi}{6}} \end{aligned}$$

- 2) Evaluate the integral  $\int \frac{dx}{\sqrt{4-9x^2}}$ .

$$\begin{aligned} \text{let } u &= 3x \\ du &= 3dx \\ \frac{1}{3} du &= dx \end{aligned}$$

$$\begin{aligned} \int \frac{dx}{\sqrt{4-9x^2}} &= \frac{1}{3} \int \frac{du}{\sqrt{4-u^2}} \quad \checkmark \text{ notice } a=2 \\ &= \frac{1}{3} \sin^{-1} \left( \frac{u}{2} \right) + C \\ &= \boxed{\frac{1}{3} \sin^{-1} \left( \frac{3x}{2} \right) + C} \end{aligned}$$

- 3) Evaluate the definite integral  $\int_0^{\frac{\sqrt{3}}{2}} \frac{du}{\sqrt{1-u^2}}$ .

$$\begin{aligned} \int_0^{\frac{\sqrt{3}}{2}} \frac{du}{\sqrt{1-u^2}} &= \sin^{-1} u \Big|_0^{\frac{\sqrt{3}}{2}} \\ &= \sin^{-1} \left( \frac{\sqrt{3}}{2} \right) - \sin^{-1}(0) \\ &= \boxed{\frac{\pi}{3}} \end{aligned}$$

4) Find an antiderivative of  $\int \frac{1}{1+4x^2} dx$ .

$$\begin{aligned} \text{let } u &= 2x \\ du &= 2dx \end{aligned}$$

$$\frac{1}{2} du = dx$$

$$\int \frac{1}{1+4x^2} dx = \frac{1}{2} \int \tan^{-1} u + C$$

$$= \boxed{\frac{1}{2} \tan^{-1}(2x) + C}$$

5) Find an antiderivative of  $\int \frac{1}{9+x^2} dx$ .  $a=3$

$$\int \frac{dx}{9+x^2} = \boxed{\frac{1}{3} \tan^{-1}\left(\frac{x}{3}\right) + C}$$

6) Evaluate the definite integral  $\int_{\frac{\sqrt{3}}{3}}^{\sqrt{3}} \frac{dx}{1+x^2}$ .

$$\int_{\frac{\sqrt{3}}{3}}^{\sqrt{3}} \frac{dx}{1+x^2} = \tan^{-1} x \Big|_{\frac{\sqrt{3}}{3}}^{\sqrt{3}}$$

$$= \tan^{-1}(\sqrt{3}) - \tan^{-1}\left(\frac{\sqrt{3}}{3}\right)$$

$$= \boxed{\frac{\pi}{6}}$$
